
1. Bins outside the crop window = noise
Doppler bin
Time bin
Magnitude [dB]
2. Noise level = median of the noise bins
noise level -30.0 dB
floor = noise + 8 dB = -22.0 dB
Median magnitude over time [dB]
Doppler bin
3. Floor removes 99% of the noise values
outside crop window (noise)
inside crop window
clipped to 0
Density
Magnitude [dB]
4. After the floor: below -22.0 dB → 0
Doppler bin
Time bin
Scaled magnitude
